

MANAGEMENT OF DEVICES

Deploying mobile devices within your organization can quickly improve communication and streamline processes. A centralized charging solution will keep the devices readily available for the user and secured when not in use, lowering costs associated with loss/theft and ensuring devices are ready for each shift. On average, the mobile device cost per employee is \$1800, so the risk of lost or stolen devices can quickly cut into the ROI.

With Bretford's PowerSync and Connect solutions, we can help increased efficiency as well:

- A centralized, easy to access charging and storage solution ensures the employees know exactly where to go for a fully charged device.
- Remote Management via Connect Portal allows IT administration quick and secure access to the locker environment from any web browser.
- The option to include USB connection with data transfer provides the ability to automate updates and provisioning of devices via a tether to the local network in each locker bay*.

* Requires additional software/hardware

THE SOLUTION AT WORK

A petrochemical facility has deployed 300 iPads 1:1 to their technicians and engineers to perform their daily tasks. iPads were physically distributed daily and, upon return at the end of each workday, required the need to cache files and update iPad applications manually via USB hub. This process took approximately 10 minutes per device to complete, eating up costly staff-hours of IT administrations time.

By deploying the TechGuard Connect Lockers along with a provisioning tool*, the organization can now securely push daily updates to all of the devices over the local network, while ensuring the device is secure, charged, and updated for the next workday. All of this is performed without physical interaction from the IT administrators, providing a 12-month ROI of over \$1 million.

Bretford Connect™ | Our cloud-based asset management software allows you to provision, access, view and manage usage activity.

Apple Provisioning Utility | Fully automate a zero-touch workflow with the assistance of a Mac Mini.

Keyless Access | Store and secure devices with RFID-ready technology. Locker includes a full-color touchscreen display with graphic PIN-enabled access.

Supreme Modularity | Options in locker bays include AC charging, USB-A charging, Ethernet ports, and cable retention, giving you the ability to upgrade as your business grows.
